Making Tar, Coal and Gas by Machinery. THE attention and interest of the citizens of Wilmington and surrounding country of North Carolina are, and the first Monday of July. The French Department will be have been sometime since, attracted by a complete and sim- under the care of Miss SARAH DRAKE, an accomplished ple apparatus for the purpose of manufacturing tar and coal. lady and scholar. and generating gas from lightwood.

The above machine was invented by Dr. Wm P. McConnell, an eminent chemist of Washington City, D. C., and having obtained a patent right for the United States for the same, he has associated himself with Veirs & Townshend, under the style of Veirs, Townshend & Co.

For the purpose of manufacturing and carrying on the business, they have had an apparatus constructed in Baltimore, sufficient to contain three cords of wood, and located on the place of Jas. R. Grist, Esq., near Livingston Creek, in Brunswick county, N. C., from whom they have purchased all the lightwood on about six thousand acres of pine land, where they have been operating; but not being organized at pressirous to introduce and show the utility and profitableness 9 59 sirous to introduce and show the dath.

13 38 of said business, they have recently had constructed a small apparatus, near the Railroad in this place, from which a 4 29 few days ago, they have given perfect satisfaction to all who 10 98 witnessed its operation, in regard to the surprising yield of tar from a cord of an average quality of lightwood, besides the coal and gas, which is stated in certificate below by gentlemen who witnessed the operation.

thin sheet-iron; there are four flues or retorts, extending from the top plate to bottom. The wood to be converted into tar and coal, is placed in the machine from the doors, and the fines heated with a small portion of the charcoal, made 13 25 from the same wood, creating an intense heat in the body of 10 92 the machine, causing the tar to run out from a spout near this Institution, it is presumed, will afford an excellent op-6 54 the bottom of the machine. Two hands are sufficient to attend to two machines, each containing four cords of light-11 78 wood, after it has been delivered at the location ;-that is. 6 87 they will place in the wood, fill the barrels with tar, and take out the coal ;-thus making an operation each day from 37 77 both. Four or five hours will be sufficient to char four cords of wood-that is, allowing the machines to contain four cords of wood, which size will be very portable; but as it regards 20 12 the size, it will be discretionary with those who use them. They can be made to char and contain twenty cords; and in regard to durability, the flues being the only part exposed to the fire, and they being built of thick boiler iron, have been pronounced by experienced judges, to last more than two years, as they are exposed to the heat but a few hours each day. The cost of apparatus is comparatively small.

Those who wish to engage in this (a very lucrative) business, or wish farther information, can obtain such by addressing Veirs, Townshand & Co., Wilmington, N. C., as 117 75 soon as practicable.

We, the undersigned, certify that on yesterday, the 25th 2 58 inst., we witnessed in this place the operation of manufacturing Tar, Coal and Gas, by Veirs, Townshend & Co's.
